

# Data sheet

Part number : HXTY115RGSE-1100-TR

2011/65/EU, (EU)2015/863  
10 Substances regulation compliant

Lead-free solder heat resistant product

Package	SMD top view package, Yellow color emitting LED Outer dimension 3.2 x 1.4 x 0.58mm ( L x W x H )
Product features	<ul style="list-style-type: none"> <li>•Automotive quality standard: AEC-Q102 compliant</li> <li>•Moisture sensitivity level MSL 2a</li> <li>•Luminous flux 33.5lm (TYP.), Chromaticity coordinates <math>x = 0.5680</math> <math>y = 0.4194</math> @140mA</li> <li>•Operating temperature : -40 to +125°C</li> <li>•RoHS:2011/65/EU, (EU)2015/863 compliant</li> <li>•Lead-free soldering compatible</li> </ul>

## Recommended applications

- Light source for automotive : Daytime running lights, turn signal lamp, etc.

Outline dimensions

HXTY115RGSE-1100-TR

Unit : mm  
Weight : 7.7mg  
Tolerance : ±0.1

Recommended soldering pattern

Unit : mm

## Specifications

## HXTY115RGSE-1100-TR

## 【Product overview】

Die material	InGaN
Emitting color	Yellow
Resin color 【Emitting area】	Amber
Resin color 【Lamp housing】	White

## 【Absolute maximum ratings】

(Ta=25°C)			
Item	Symbol	Maximum ratings	Units
Power dissipation	$P_d$	700	mW
Forward current	$I_F$	200	mA
Repetitive peak forward current "0.5ms, 1/20duty"	$I_{FRM}$	400	mA
Reverse current	$I_R$	85	mA
Operating temperature	$T_{opr}$	-40 to +125	°C
Storage temperature	$T_{stg}$	-40 to +125	°C
Junction temperature	$T_j$	150	°C
Electrostatic discharge threshold "HBM"	ESD	8,000	V
Soldering temperature "Reflow soldering"	$T_{sld}$	260	°C

Note1 Solderpoint temerature

Note2 ESD testing method : JEITA ED-4701/302A(304A)／IEC 60810 Human Body Model(HBM) 1.5kΩ, 100pF

Note3 Please refer to page 9, Soldering conditions.

## 【Thermal characteristics】

(Ta=25°C, $I_F=140mA$ )			
Item	Symbol	Typ.	Units
thermal resistance 【junction - solder point】	$R_{th(j-s)}$	18	°C/W

# Specifications

# HXTY115RGSE-1100-TR

## 【Electro-optical characteristics】

(Ta=25℃)

Item	Symbol	Conditions	Min.	Typ.	Max.	Units	
Forward voltage	$V_F$	$I_F = 140\text{mA}$	2.90	3.10	3.30	V	Note4
Luminous flux	$\phi_v$	$I_F = 140\text{mA}$	28.7	33.5	42.2	lm	Note5
Chromaticity coordinates	x	$I_F = 140\text{mA}$	-	0.5680	-		Note6,7
	y		-	0.4194	-		
Dominant wavelength	$\lambda_d$	$I_F = 140\text{mA}$	588.0	590.0	592.0	nm	Note6,7
Color Purity	-	$I_F = 140\text{mA}$	92	96	100	%	Note6,7
Half intensity angle	$\Delta\theta_x$	$I_F = 140\text{mA}$	-	115	-	deg.	Note9
	$\Delta\theta_y$		-	115	-		

Note4,5,6 Please refer to the each sorting chart.

Note7 Chromaticity coordinates ; x and y according to CIE1931

Note8 Calculated value from chromaticity coordinates

Note9 Viewing angle at 50% luminous intensity  $I_v$ ,  $\Delta\theta_x$  ; housing long side axis,  $\Delta\theta_y$  ; housing short side axis

## 【Sorting chart for luminous flux】

LEDs shall be sorted out into the following chart and each rank parts shall be packed separately when shipping.

Rank	Luminous flux $\phi_v$ (lm)		Conditions
	Min.	Max.	
BM	28.7	31.6	$I_F = 140\text{mA}$ $T_a = 25^\circ\text{C}$
BN	31.6	34.8	
BP	34.8	38.3	
BQ	38.3	42.2	

Note Tolerance :  $\pm 10\%$

## 【Sorting chart for forward voltage】

LEDs shall be sorted out into the following chart and each rank parts shall be packed separately when shipping.

Rank	Forward voltage $V_F$ (V)		Conditions
	Min.	Max.	
C	2.90	3.10	$I_F = 140\text{mA}$ $T_a = 25^\circ\text{C}$
D	3.10	3.30	

Note Tolerance :  $\pm 0.1\text{V}$

# Specifications

# HXTY115RGSE-1100-TR

## 【Sorting chart for chromaticity coordinates】

LEDs shall be sorted out into the following chart and each rank parts shall be packed separately when shipping.

( $I_F=140\text{mA}$ ,  $T_a=25^\circ\text{C}$ )

Rank	Point 1		Point 2		Point 3		Point 4	
	x	y	x	y	x	y	x	y
60	0.5757	0.4102	0.5579	0.4276	0.5680	0.4314	0.5854	0.4140
61	0.5736	0.4094	0.5499	0.4244	0.5579	0.4276	0.5757	0.4102

Note Tolerance :  $\pm 0.01$

## 【Reference】 Details of chromaticity coordinates rank

Rank	Dominant wavelength		Color purity	
	Min. (nm)	Max. (nm)	Min. (%)	Max. (%)
60	588	592	95	100
61	588	592	92	95

Note The above values are calculated from each chromaticity coordinates and have no tolerance.

Technical Data

## Soldering condition

HXTY115RGSE-1100-TR

## 【Soldering Precaution】

(acc.to EIAJ-4701/300)

1. Heat stress during soldering will influence the reliability of LEDs, however that effect will vary with heating method. Also, if components with different shapes need to be mounted together, it is recommended to set the soldering pad temperature according to the component most vulnerable to heat stress (ex. chip type LED).
2. LED parts including the resin has not stabilized immediately after the soldering. Any mechanical stress may cause damage to the product. Please avoid these stresses, especially stacking the boards, or any other storage method which may cause the boards to warp. Also please avoid the boards from sliding against hard materials.
3. The recommended temperature profile for reflow soldering is listed as the pad temperature of soldering point. This is due to the fact that temperature distribution varies on heating method, PCB material, other components in the assembly, and concentration of the parts mounted.  
Please do not repeat the heating process during reflow more than two times.

## 【Recommended reflow soldering condition】

- Note 1 Temperature Profile for the reflow should be set to pad temperature of soldering point, which is the maximum temperature for soldering. Lowering the heating temperature and decreasing heating time is very effective in achieving higher reliability.
- Note 2 The reflow soldering process should be done max2 times. The interval between first and second process should be as short as possible to prevent absorption of moisture to LED resin. Please cool down the LED temperature at room temperature after soldering, then start the second process.

## Soldering condition

## HXTY115RGSE-1100-TR

4. If soldering manually, the peak temperature changes according to the size of land and the shape of soldering iron tip. Therefore please confirm there is no problem before usage. Also, Stanley recommends using a soldering iron equipped with temperature control and the peak temperature to be lowered.  
During the actual soldering process, make sure that the soldering iron never touches the LED itself, and avoid the LED's electrode temperature reaching above the temperature of the solder pad.  
All repairs must be performed only once in the same spot, and please avoid reusing components.
5. In soldering process, immediately after iron tip is cleaned, please make sure that the soldering iron reaches the appropriate temperature, then use it. Also, please avoid applying any types of pressure to the soldered components before the solder is cooling and hardening, as it may deteriorate solder performance and solder quality.

### 【Recommended manual soldering condition】

Temperature of iron tip	350℃ max.
Soldering duration, time	3sec. max., 1 time

6. When using adhesive material for tentative fixatives, thermosetting resin or Ultraviolet radiation(UV) setting resin with heat shall be recommended.  
《Curing condition, Temperature:150℃ max. / Time:120sec.max.》
7. Flow soldering (dip soldering) is not guaranteed for this product.
8. Please confirm in advance there is no problem by assessment on your side if cleaning process is necessary.  
We can not accept any quality issues caused by the cleaning process.  
As this product uses the low hardness silicone resin for the lens, please avoid cleaning to give pressure on the surface of the resin.  
Please make sure ultrasonic cleaning is not recommended for this product as well.  
We will recommend isopropyl alcohol as a solvent used for cleaning.  
Some chemicals, including Freon substitute detergent could corrode the lens or the casing surface, which cause discoloration, cloud, crack and so on.  
Please review the reference chart below for cleaning. If water is used to clean (including the final cleaning process), please use pure water (not tap water), and completely dry the component before using.

Cleaning agents	Recommended / Not recommended
Isopropyl alcohol	✓ Recommended
Trichloroethylene	x Not recommended
Chloroethene	x Not recommended
Acetone	x Not recommended
Thinner	x Not recommended

## Handling precautions

## HXTY115RGSE-1100-TR

### 【For electrostatic discharge (ESD)】

LED with an InGaN die is sensitive to voltage surges generated by On/Off status change and friction with synthetic materials, which may cause severe damage to the die or undermine its reliability. Damaged products may experience conditions such as extremely high reverse voltage, decrease of forward rise voltage, deterioration in optical characteristics.

Stanley InGaN products are packed with anti-static components. However, following precautions must be taken into account upon product shipment.

### 1. Electrification/static electricity protection

In order to avoid product (die) damage from static electricity caused by unprotected handling by operator and other charged materials coming in contact with the product, Stanley recommends taking the following precautions.

- ① Do not place electrified non-conductive materials near the LED product.  
Avoid LED products from coming into contact with metallic materials. (Should the metallic material be charged, sudden surge voltage will most likely damaged the product.)
- ② Avoid a working process which may cause the LED product to rub against other materials.
- ③ Install ground wires for any equipment, where they can be installed, with measures to avoid static electricity surges.
- ④ Prepare a ESD protective area by placing a Conductive Mattress (1MΩ MAX.) and Ionizer to remove any static electricity.
- ⑤ Operators should wear a protective wrist-strap.
- ⑥ Operators should wear conductive work-clothes and shoes.
- ⑦ To handle the products directly, Stanley recommends the use of ceramic, and not metallic, tweezers.

### 2. Working environment

- ① A dry environment is more likely to cause static electricity. Although a dry environment is ideal for storage state of LED products, Stanley recommends an environment with approximately 50% humidity after the soldering process.
- ② Recommended static electricity level in the working environment is less than 150V, which is the same value as Integrated Circuits (which are sensitive to static electricity).

## Handling precautions

## HXTY115RGSE-1100-TR

### 【Other precautions】

1. The products are designed to achieve the highest performance reliability, however they can be influenced by usage conditions.
2. Absolute maximum ratings are set to prevent LED products from breaking due to extreme stress (temperature, current, voltage, etc.). These ratings must never be overrun even for a moment.
3. To achieve the highest performance reliability, it is necessary to take into account, factors such as forward voltage adjusted to the usage temperature condition, derating of the power consumption, and other variable factors.
4. Please insert straight protective resistors into the circuit in order to stabilize LED operation and to prevent the device from overheating.
5. Please avoid to stick foreign materials because molding resin in the products has adhesiveness.  
And please don't touch lens portion, so it cause the wire open circuit etc. when the stress hangs to the lens portion.
6. To handle with tweezers, please avoid excessive stress to this part. Excessive stress may cause non-lighting due to deformation, crack and breaking. Stanley recommends the use of ceramic tweezers, and not sharp one.
7. Please note external stress such as dropping and hitting may cause non-lighting due to deformation, crack and breaking.
8. Stanley does not recommend supersonic wave welding as it cause resonance with sealing resin and may cause breaking of conductive wire.  
Please use after affirming beforehand there is no problem.
9. The solder crack by the heat stress might be generated when the LED is soldered with the metal plate and go enough in a prior confirmation, please.
10. Please note piling PCBs may stress LEDs. It may cause non-lighting due to deformation, crack and breaking.
11. This part does not have proof for water, humidity and salt damage.  
Please use after affirming beforehand there is no problem if using on above conditions.
12. Please keep in desiccator regardless of before or after mounting not to be affected by corrosive gas when keeping products.  
Also please make sure if there is any gas which occur in surrounding area or enter from outside when using products.
13. Please check the actual performance in the assembly because the Specification Sheets are described for single LED.
14. Please refrain from looking directly at the light source of LED at high output, as it may harm your vision.
15. The products are designed to perform without failure in the recommended usage conditions.  
However, please take the necessary precautions to prevent fire, injury, and other damages from these unexpected failures.
16. The products are manufactured to be used for ordinary electronic equipment. Please contact our sales staff in advance when exceptional quality and reliability are required, when the failure or malfunction of the products might directly jeopardize life or health (such as for airplanes, aerospace, transport equipment, medical applications, nuclear reactor control systems and so on).
17. The formal specification sheets should be exchanged and signed by both parties.

## Handling precautions

HXTY115RGSE-1100-TR

### 【Handling precautions for product mounting】

#### <Recommendation>

1. Picking up point with nozzle : Lamp housing of the product (  area : Shown below)

The pick up point is lamp housing only because the silicone resin used for the lens is soft.  
(If the nozzle makes contact with the lens, the products might be destroyed)

Please adjust the load, the pick up point, the nozzle diameter and etc. before mounting because the over load can cause the breakage of the lamp housing.

2. Recommended nozzle shape

## Packaging specifications

## HXTY115RGSE-1100-TR

This product is baked (moisture removal) before packaging, and is shipped in moisture-proof packaging (as shown below) to minimize moisture absorption during transportation and storage. However, with regard to storing the products, Stanley recommends the use of dry-box under the following conditions is recommended. Moisture-proof bag as the packaging is made of anti-static material but packaging box is not.

### 【Recommended storage condition / products warranty period】

Temperature	+5 to 30°C
Humidity	Under 70%

In the case of the package unopened, please use within 6 months 【Recommended storage condition】. Please avoid rapid transition from low temp. condition to high temp. condition and storage in corroding and dusty environment.

### 【Time elapsed after package opening】

The package should not be opened until immediately prior to its use, and please keep the time frame between package opening and soldering which is 【maximum 672h】.

If the device needs to be soldered twice, both soldering operations must be completed within the 672h.

If any components should remain unused, please reseal the package and store them under the conditions described in the 【Recommended Storage Condition】 above.

This product must be required to perform baking process (moisture removal) for at 48h (min.) to 72h (max.) at  $60 \pm 5$  degrees Celsius if following conditions apply.

1. In the case of silica gel (blue) which indicates the moisture level within the package, changes or loses its blue color.
2. In the case of time passes for 672h after the package is opened once.

Baking process should be performed after LED having been taken out of the package.

Baking may be performed in the tape-reel form, however if it is performed with the reel stacked over one another, it may cause deformation of the reels and taping materials and later obstruct mounting. Please handle only once it has returned to room temperature. Provided that, baking process shall be 2 times max.

Packaging specifications

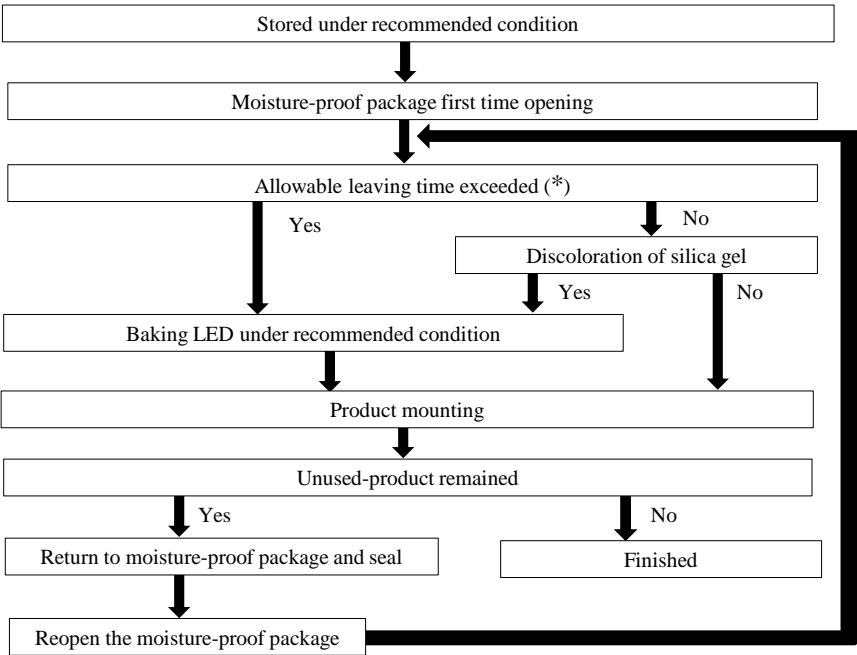

HXTY115RGSE-1100-TR

【Moisture-proof packaging specification】

No.	Part name	Material	Remarks
①	Moisture-proof bag with Aluminum layer	PET+Al+PE	with ESD protection

【Flow chart-package opening to mounting】

Allowable leaving time means the maximum allowable leaving time after opening package, which depends on each LED type. The allowable leaving time should be calculated from the first opening of package to the time when soldering process is finished. When judging if the allowable leaving time has exceeded or not, please subtract the soldering time. The allowable leaving time after reopening should be calculated from the first opening of package, or from the time when baking process is finished.

# Taping and reel specifications

HXTY115RGSE-1100-TR

(acc.to JIS-C0806-03)

## 【Appearance】

## Note

"-TR" means Cathode Side of LEDs; should be placed on the sprocket-hole side.

Items		Specifications	Remarks
Leader area	Cover-tape	Cover-tape shall be longer than 300mm without carrier-tape	The end of cover-tape shall be held with adhesive tape.
	Carrier-tape	Empty pocket shall be more than 25 pieces.	Please refer to the above figure for Taping & reel orientation .
Trailer area		Empty pocket shall be more than 40 pieces.	The end of taping shall be inserted into a slit of the hub.

## Taping and reel specifications

**HXTY115RGSE-1100-TR**

(acc.to JIS-C0806-03)

**【 Qty. per reel】**

3,000parts/reel

Minimum Qty. per reel might be 500 parts when getting less than 3,000 parts.

In such case, parts of 500-unit-qty. shall be packed in a reel and the qty. shall be identified on the label

**【Mechanical strength】**

Cover-tape adhesive strength shall be 0.1 to 1.0N ( An angle between carrier-tape and cover-tape shall be170 deg. ).

Both tapes shall be so sealed that the contained parts will not come out from the tape when it is bent at a radius of 15mm.

**【 Others】**

Reversed-orientation, Up-side down placing, side placing and out of spec. parts mix shall not be held.

Empty pocket per reel shall be defined as follows.

Qty./reel	Max. qty. of empty pocket	Remaks
500	1	-
1,000	1	-
1,500	1	-
2,000	2	No continuance
2,500	2	No continuance

## HXTY115RGSE-1100-TR

Unit: mm

Technical drawing of a mechanical part, showing front and side views with dimensions.

**Front View (Left):**

- Overall width:  $4 \pm 0.1$
- Overall height:  $8 \pm 0.1$
- Top hole diameter:  $\Phi 1.5 \begin{smallmatrix} +0.1 \\ 0 \end{smallmatrix}$
- Top hole spacing:  $1.65 \pm 0.1$
- Top hole offset from right edge:  $1.75 \pm 0.1$
- Bottom hole diameter:  $\Phi 1 \begin{smallmatrix} +0.2 \\ 0 \end{smallmatrix}$  (Center hole)
- Bottom hole offset from right edge:  $2 \pm 0.05$
- Bottom hole offset from center:  $4 \pm 0.1$
- Bottom hole offset from top hole center:  $3.5 \pm 0.05$

**Side View (Right):**

- Top flange thickness:  $0.2$
- Top flange outer diameter:  $\Phi 1$
- Top flange inner diameter:  $\Phi 2$
- Top flange height:  $3.45 \pm 0.1$
- Top flange offset from center:  $0.85 \pm 0.1$
- Top flange offset from top hole center:  $1.75 \pm 0.1$
- Top flange offset from bottom hole center:  $3.5 \pm 0.05$
- Top flange offset from right edge:  $2 \pm 0.05$
- Top flange offset from center:  $4 \pm 0.1$

【Reel dimensions】

The drawing consists of two views of a reel. The top view is a circular cross-section with a diameter of  $\phi 180_{-3}^0$  mm. It features four rectangular cutouts arranged symmetrically. A central hub has a diameter of  $\phi 21_{\pm 0.8}$  mm. A dimension of  $2_{\pm 0.5}$  mm is shown for the distance from the center to the inner edge of the cutouts. A circled detail in the top view is shown in a larger view below. This larger view shows a cross-section of the reel's body with a total width of  $13_{\pm 0.2}$  mm and a central slot width of  $9_{\pm 0.3}$  mm. The overall height of the reel is  $\phi 60_{+1}^0$  mm.

Hydrogen sulphide	AEC-Q102 No.C12	H <sub>2</sub> S 15ppm Ta=40℃ Rh=90%	336 h	0 / 78
Flowing mixed gas	AEC-Q102 No.C13	H <sub>2</sub> S 0.01ppm SO <sub>2</sub> 0.2ppm NO <sub>2</sub> 0.2ppm Cl <sub>2</sub> 0.01ppm Ta=25℃ Rh=75%	500 h	0 / 78
Bending	AEC-Q102 No.C14	Soldering in the longitudinal direction of the board and push until it bends 3mm from the back side	-	0 / 30

2. Failure criteria

Item	Symbol	Condition	Failure criteria
Luminous intensity	I <sub>v</sub>	I <sub>F</sub> =80mA	Measured value < Initial value × 0.8, Measured value ≥ Initial value × 1.2
Color coordinates	ccx & ccy	I <sub>F</sub> =80mA	Measured value < Initial value ± 0.01
Forward voltage	V <sub>F</sub>	I <sub>F</sub> =80mA	Measured value < Initial value × 0.9, Measured value ≥ Initial value × 1.1
Cosmetic appearance	-	-	Notable discoloration, deformation and cracking

## HXTY115RGSE-1100-TR

## Special Notice to Customers Using the Products and Technical Information Shown in This Data Sheet

- 1) The technical information shown in the data sheets are limited to the typical characteristics and circuit examples of the referenced products. It does not constitute the warranting of industrial property nor the granting of any license.
- 2) For the purpose of product improvement, the specifications, characteristics and technical data described in the data sheets are subject to change without prior notice. Therefore, it is recommended that the most updated specifications be used in your design.
- 3) When using the products described in the data sheets, please adhere to the maximum ratings for operating voltage, heat dissipation characteristics, and other precautions for use. We are not responsible for any damage which may occur if these specifications are exceeded.
- 4) The products that have been described to this catalog are manufactured so that they will be used for the electrical instrument of the benchmark (OA equipment, telecommunications equipment, AV machine, home appliance and measuring instrument).  
The application of aircrafts, space borne application, transportation equipment, medical equipment and nuclear power control equipment, etc. needs a high reliability and safety, and the breakdown and the wrong operation might influence the life or the human body. Please consult us beforehand if you plan to use our product for the usages of aircrafts, space borne application, transportation equipment, medical equipment and nuclear power control equipment, etc. except OA equipment, telecommunications equipment, AV machine, home appliance and measuring instrument.
- 5) In order to export the products or technologies described in this data sheet which are under the “Foreign Exchange and Foreign Trade Control Law,” it is necessary to first obtain an export permit from the Japanese government.
- 6) No part of this data sheet may be reprinted or reproduced without prior written permission from Stanley Electric Co., Ltd.
- 7) The most updated edition of this data sheet can be obtained from the address below:
