Data sheet

Part number : VXJB1104LSE-TR

2011/65/EU, (EU)2015/863
10 Substances regulation compliant

Lead-free solder heat resistant product

Package	PLCC-2 package Emitting color : Blue Outer dimension 3.5 x 2.8 x 1.9mm (L x W x H)
Product features	・Wide range temperature applicable product ・High reliability (for automotive applications and other high-reliability required applications) ・Lead–free soldering compatible ・RoHS: 2011/65/EU, (EU)2015/863 compliant

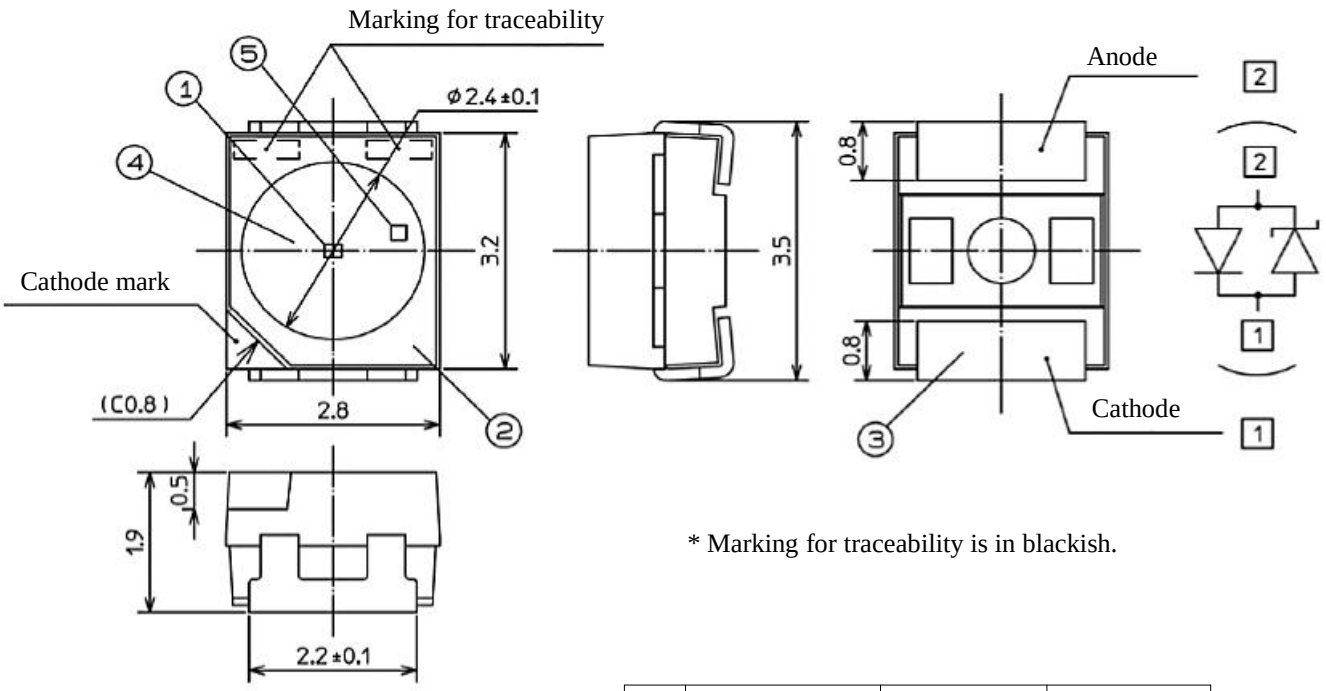
Recommended applications

・・Automotive interior: Switch and buttons , meter panel, car audio , HVAC, other various indicator etc.

Outline dimensions

VXJB1104LSE-TR

Unit : mm
Weight : 33mg
Tolerance : ±0.2

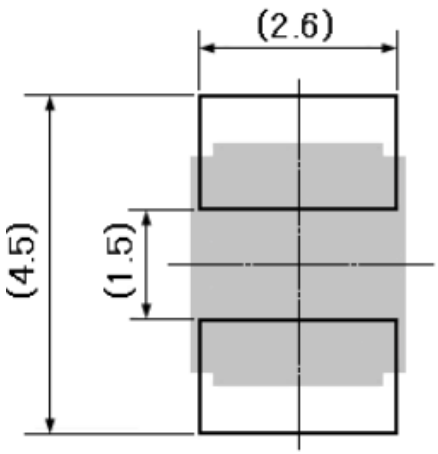


* Marking for traceability is in blackish.

No.	Part name	Material	Qty.
①	LED die	InGaN	1
②	Lamp housing	White resin	1
③	Electrode	Au/Pd plating	Anode : 1 Cathode : 1
④	Encapsulant	Silicone resin	1
⑤	Protection diode	Si	1

Recommended soldering pattern

Unit : mm



Specifications VXJB1104LSE-TR

【 Product overview 】

Die Material	InGaN
Emitting Color	Blue
Resin Color【Emitting Area】	Water clear
Resin Color【Lamp Housing】	Blue

【 Absolute maximum ratings 】

(Ta=25℃)

Item	Symbol	Maximum ratings	Units	
Power dissipation	P_d	117	mW	
Forward current	I_F	30	mA	
Repetitive peak forward current "1ms,1/10duty"	I_{FRM}	100	mA	
I_F derate linearly from "85℃"	ΔI_F	0.86	mA/℃	
I_{FRM} derate linearly from "85℃"	ΔI_{FRM}	2.86	mA/℃	
Reverse current	V_R	70	V	
Operating temperature	T_{opr}	-40 ～ +100	℃	
Storage temperature	T_{stg}	-40 ～ +120	℃	
Junction temperature	T_j	120	℃	
Electrostatic discharge threshold "HBM"	ESD	1,000	V	Note1
Soldering temperature "Reflow soldering"	T_{sld}	260	℃	Note2

Note1 ESD testing method : JEITA ED-4701/302(304A) Human Body Model(HBM) 1.5kΩ,100pF

Note2 Please refer to page 8, soldering conditions.

【 Thermal characteristics 】

(Ta=25℃)

Item	Symbol	Typ.	Units	
Thermal resistance【Junction - Ambient】	$R_{th(j-a)}$	270	℃/W	Note3
Thermal resistance【Junction - Solder point】	$R_{th(j-s)}$	75	℃/W	

Note3 $R_{th(j-a)}$ Measurement Condition

・Substrate : FR4 (t=1.6mm)

・Pattern Size : $16mm^2$

Specifications VXJB1104LSE-TR

【 Electro-optical characteristics 】

(Ta=25℃)

Item	Symbol	Conditions	Min.	Typ.	Max.	Units	
Forward voltage	V_F	I_F = 20mA	2.5	3.0	3.5	V	Note4
Luminous intensity	I_V	I_F = 20mA	82	170	270	mcd	Note5
Luminous flux	Φ_V	I_F = 20mA	-	0.4	-	lm	
Peak wavelength	λp	I_F = 20mA	-	458	-	nm	
Dominant wavelength	λd	I_F = 20mA	460	464	472	nm	Note6
Spectral line half width	△λ	I_F = 20mA	-	21	-	nm	
Half intensity angle	$\Delta\theta_X$	I_F = 20mA	-	120	-	deg.	Note7
	$\Delta\theta_Y$		-	120	-		

Note4 Tolerance : ±0.1V

Note5,6 Please refer to the attached sheets, each sorting chart.

Note7 Viewing angle at 50% I_V, $\Delta\theta_X$: housing long side axis, $\Delta\theta_Y$: housing short side axis

【 Sorting chart for luminous intensity, Iv and dominant wavelength λd 】

LEDs shall be sorted out into the following chart and each rank parts shall be packed separately when shipping.

Luminous intensity (Iv) rank

Rank	Luminous intensity I_V (mcd)		Conditions
	Min.	Max.	
BZ	82	100	Ta=25℃ I_F =20mA
C1	100	120	
C2	120	150	
C3	150	180	
C4	180	220	
C5	220	270	

Dominant wavelength (λd) rank

Rank	Dominant wavelength λd (nm)		Conditions
	Min.	Max.	
A	460	464	Ta=25℃ I_F =20mA
B	464	468	
C	468	472	

Note Above the table of Luminous Intensity (IV) values and Dominant Wavelength (λd) values are the setup valuem of the selection machine. 【Tolerance : IV…±10%、λd…±1nm】

Technical Data

VXJB1104LSE-TR

Relative intensity vs. Wavelength

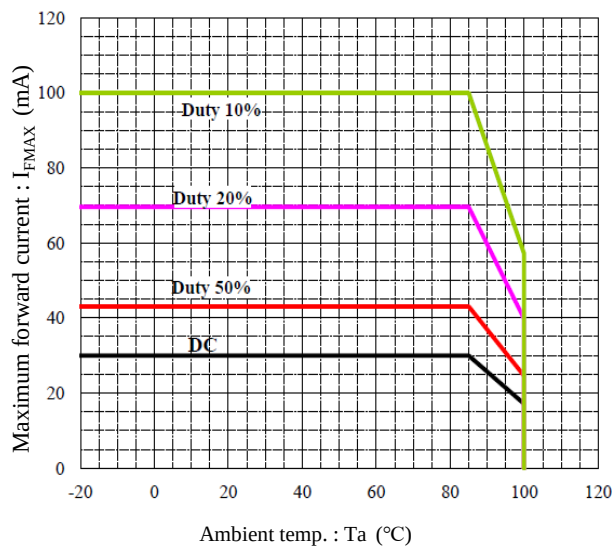
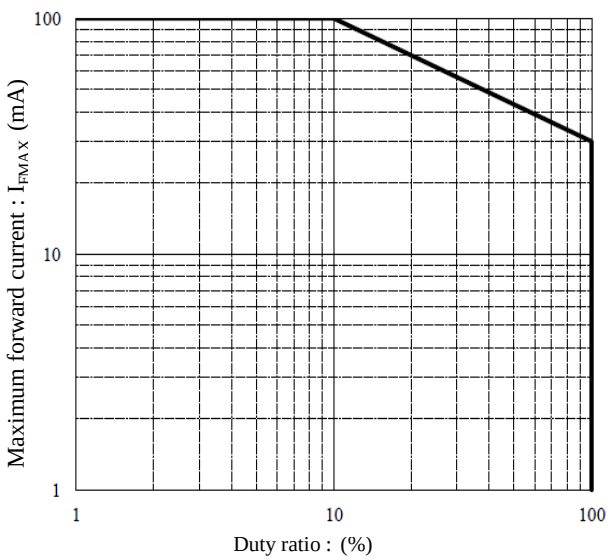
Condition : Repetition frequency ≧ 10Hz



Max. forward current vs. Duty ratio



Soldering condition

VXJB1104LSE-TR

【Soldering Precaution】

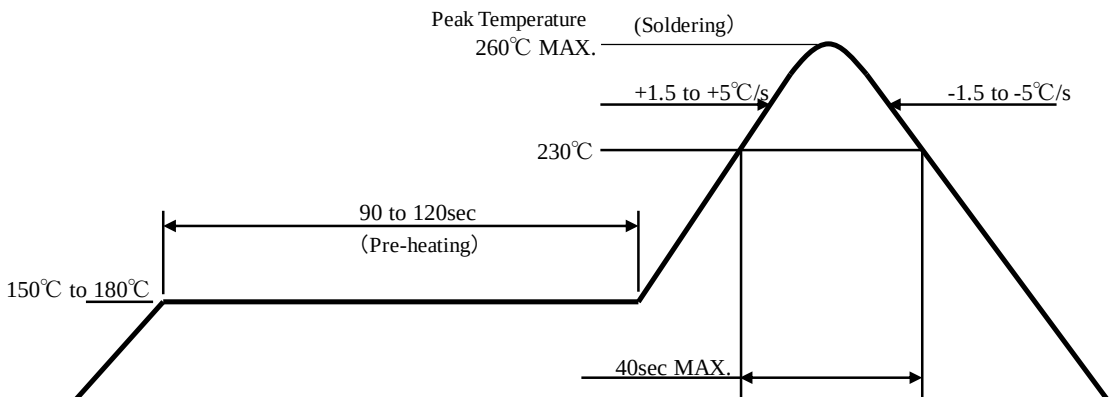
(acc.to EIAJ-4701/300)

1. Heat stress during soldering will influence the reliability of LEDs, however that effect will vary on heating method. Also, if components of varying shape are soldered together, it is recommended to set the soldering pad temperature according to the component most vulnerable to heat (e.g., surface mount LED).

2. LED parts including the resin are not stable immediately after soldering (when they are not at room temperature), any mechanical stress may cause damage to the product. Please avoid such stress after soldering, especially stacking of the boards which may cause the boards to warp and any other types of friction with hard materials.

3. Recommended temperature profile for the reflow soldering is listed as the temperature of the resin surface. Temperature distribution varies on heating method, PCB material, other components in the assembly, and mounting density .
   Please do not repeat the heating process in reflow process more than 2 times.

【Recommended Reflow Soldering Condition 】



Note 1 Temperature profile for the reflow should be set to the surface temperature of resin which is on the top of LED. This should be the maximum temperature for soldering. Lowering the heating temperature and decreasing heating time is very effective in achieving higher reliability.

Note 2 The reflow soldering process should be done up to 2 times Max. When second process is performed, interval between first and second process should be as short as possible to prevent absorption of moisture to resin of LED. The second soldering process should not be done until LEDs have returned to room temperature (by nature-cooling) after first soldering process.

Soldering condition

VXJB1104LSE-TR

4. If soldering manually, the peak temperature changes according to the size of land and the shape of soldering iron tip. Therefore please confirm there is no problem before usage. Also, Stanley recommends using a soldering iron equipped with temperature control and the peak temperature to be lowered.
   During the actual soldering process, make sure that the soldering iron never touches the LED itself, and avoid the LED's electrode temperature reaching above the temperature of the solder pad.
   All repairs must be performed only once in the same spot, and please avoid reusing components.

5. In soldering process, immediately after iron tip is cleaned, please make sure that the soldering iron reaches the appropriate temperature, then use it. Also, please avoid applying any types of pressure to the soldered components before the solder is cooling and hardening, as it may deteriorate solder performance and solder quality.

【Recommended manual soldering condition】

Temperature of iron tip	350℃ max.
Soldering duration, time	3sec. max., 1 time

6. When using adhesive material for tentative fixatives, thermosetting resin or Ultraviolet radiation(UV) setting resin with heat shall be recommended.
   《Curing condition, Temperature:150℃ max. / Time:120sec.max.》

7. Flow soldering (dip soldering) is not guaranteed for this product.

8. Please confirm in advance there is no problem by assessment on your side if cleaning process is necessary.
   We can not accept any quality issues caused by the cleaning process.
   As this product uses the low hardness silicone resin for the lens, please avoid cleaning to give pressure on the surface of the resin.
   Please make sure ultrasonic cleaning is not recommended for this product as well.
   We will recommend isopropyl alcohol as a solvent used for cleaning.
   Some chemicals, including Freon substitute detergent could corrode the lens or the casing surface, which cause discoloration, cloud, crack and so on.
   Please review the reference chart below for cleaning. If water is used to clean (including the final cleaning process), please use pure water (not tap water), and completely dry the component before using.

Cleaning agents	Recommended / Not recommended
Isopropyl Alcohol	✓ Recommended
Trichloroethylene	x Not recommended
Chlorothene	x Not recommended
Acetone	x Not recommended
Thinner	x Not recommended

Handling precautions VXJB1104LSE-TR

【For electrostatic discharge (ESD)】

LED with an InGaN die is sensitive to voltage surges generated by On/Off status change and friction with synthetic materials, which may cause severe damage to the die or undermine its reliability. Damaged products may experience conditions such as extremely high reverse voltage, decrease of forward rise voltage, deterioration in optical characteristics.
Stanley InGaN products are packed with anti-static components. However, following precautions must be taken into account upon product shipment.

1. Electrification/static electricity protection

In order to avoid product (die) damage from static electricity caused by unprotected handling by operator and other charged materials coming in contact with the product, Stanley recommends taking the following precautions.

① Do not place electrified non-conductive materials near the LED product.
Avoid LED products from coming into contact with metallic materials.(Should the metallic material be electrified , the sudden surge voltage will most likely damage the product.)

② Avoid a working process which may cause the LED product to rub against other materials.

③ Install ground wires for any equipment, where they can be installed, with measures to avoid static electricity surges.

④ Prepare a ESD protective area by placing a Conductive Mattress (1MΩ MAX.) and Ionizer to remove any static electricity.

⑤ Operators should wear a protective wrist-strap.

⑥ Operators should wear conductive work-clothes and shoes.

⑦ To handle the products directly, Stanley recommends the use of ceramic, and not metallic, tweezers.

2. Working environment

① A dry environment is more likely to cause static electricity. Although a dry environment is ideal for storage state of LED products, Stanley recommends an environment with approximately 50% humidity after the soldering process.

② Recommended static electricity level in the working environment is less than 150V, which is the same value as Integrated Circuits (which are sensitive to static electricity).

Handling precautions VXJB1104LSE-TR

【Other precautions】

1. Stanley LED Lamps have semiconductor characteristics and are designed to ensure high reliability. However, the performance may vary depending on usage conditions

2. Absolute Maximum Ratings are set to prevent LED lamps from failing due to excess stress(temperature, current, voltage, etc.). Usage conditions must not exceed the ratings for a moment, nor do reach one item of absolute maximum ratings simultaneously.

3. In order to ensure high reliability from LED Lamps, variable factors that arise in actual usage conditions should be taken into account for designing. (Derating of TYP., MAX Forward Voltage, etc.)

4. Please insert Protective Resistors into the circuit in order to stabilize LED operation and to prevent the device from igniting due to excess current.

5. Please avoid the stick of foreign material because molding resin in the products have adhesiveness. Also please don't touch lens portion.

6. Please check the actual performance in the assembly because the Specification Sheets are described for LED device only.

7. Please refrain from looking directly at the light source of LED at high output, as it may harm your vision.

8. The products are designed to operate without failure in recommended usage conditions. However, please take the necessary precautions to prevent fire, injury, and other damages should any malfunction or failure arise.

9. The products are manufactured to be used for ordinary electronic equipment. Please contact our sales staff beforehand when exceptional quality and reliability are required, and the failure or malfunction of the products might directly jeopardize life or health (such as for airplanes, aerospace, transport equipment, medical applications, nuclear reactor control systems and so on).

10. When there is a process of supersonic wave welding etc. after mounting the product, there is a possibility of affecting on the reliability of junction part in package (junction part of die bonding and wire bonding). Please make sure there is no problem before using.

11. The formal specification sheets shall be valid only by exchange of documents signed by both parties.

Handling precautions

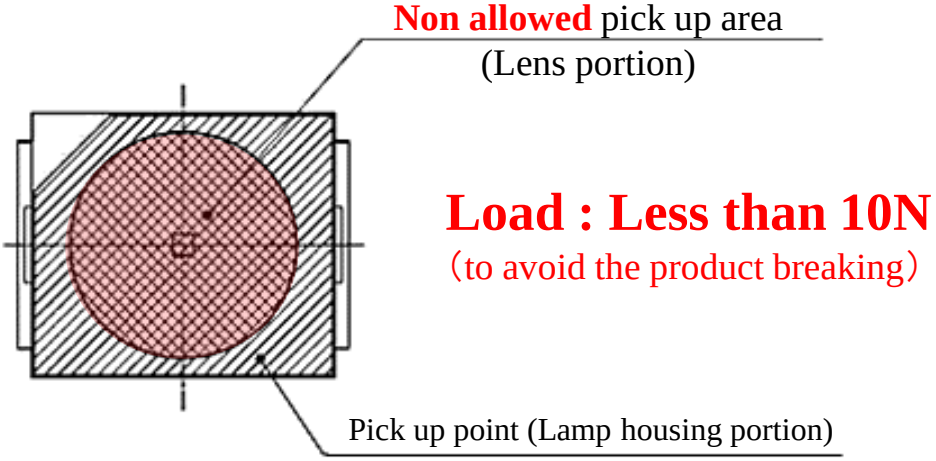
VXJB1104LSE-TR

【Handling precautions for product mounting】

＜Recommendation＞

1. Picking up point with nozzle : Lamp housing of the product (▨ area : Shown below)

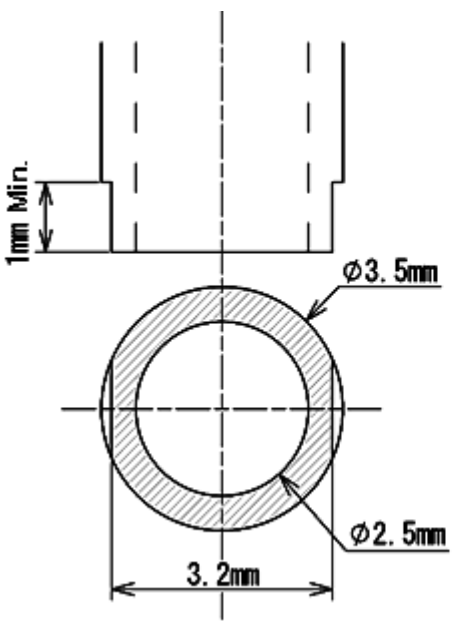
The pick up point is lamp housing only because the silicone resin used for the lens is soft.
(If the nozzle makes contact with the lens, the products might be destroyed)



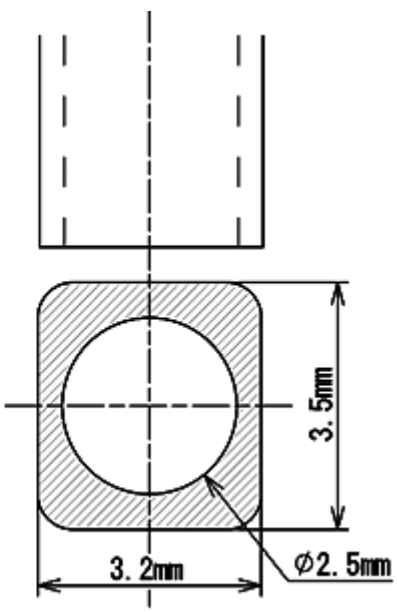
Please adjust the load, the pick up point, the nozzle diameter and etc. before mounting because the over load can cause the breakage of the lamp housing.

2. Recommended nozzle shape

a



b



※Nozzle with chamfering is recommended

Packaging specifications

VXJB1104LSE-TR

This product is baked (moisture removal) before packaging, and is shipped in moisture-proof packaging (as shown below) to minimize moisture absorption during transportation and storage. However, with regard to storing the products, Stanley recommends the use of dry-box under the following conditions is recommended. Moisture-proof bag as the packaging is made of anti-static material but packaging box is not.

【Recommended storage condition / products warranty period 】

Temperature	+5～30℃
Humidity	Under 70%

In the case of the package unopened , please use within 6 months【Recommended storage condition】.
Please avoid rapid transition from low temp. condition to high temp. condition
and storage in corroding and dusty environment.

【Time elapsed after package opening】

The package should not be opened until immediately prior to its use, and please keep the time frame between package opening and soldering which is【maximum 672h】.
If the device needs to be soldered twice, both soldering operations must be completed within the 72h.

If any components should remain unused, please reseal the package and store them under the conditions described in the【 Recommended Storage Condition 】above.

This product must be required to perform baking process (moisture removal) for
at 48h (min.) to 72h (max.) at 60±5 degrees Celsius if following conditions apply.

1. In the case of silica gel (blue) which indicates the moisture level within the package, changes or loses its blue color.
2. In the case of time passes for 672h after the package is opened once.

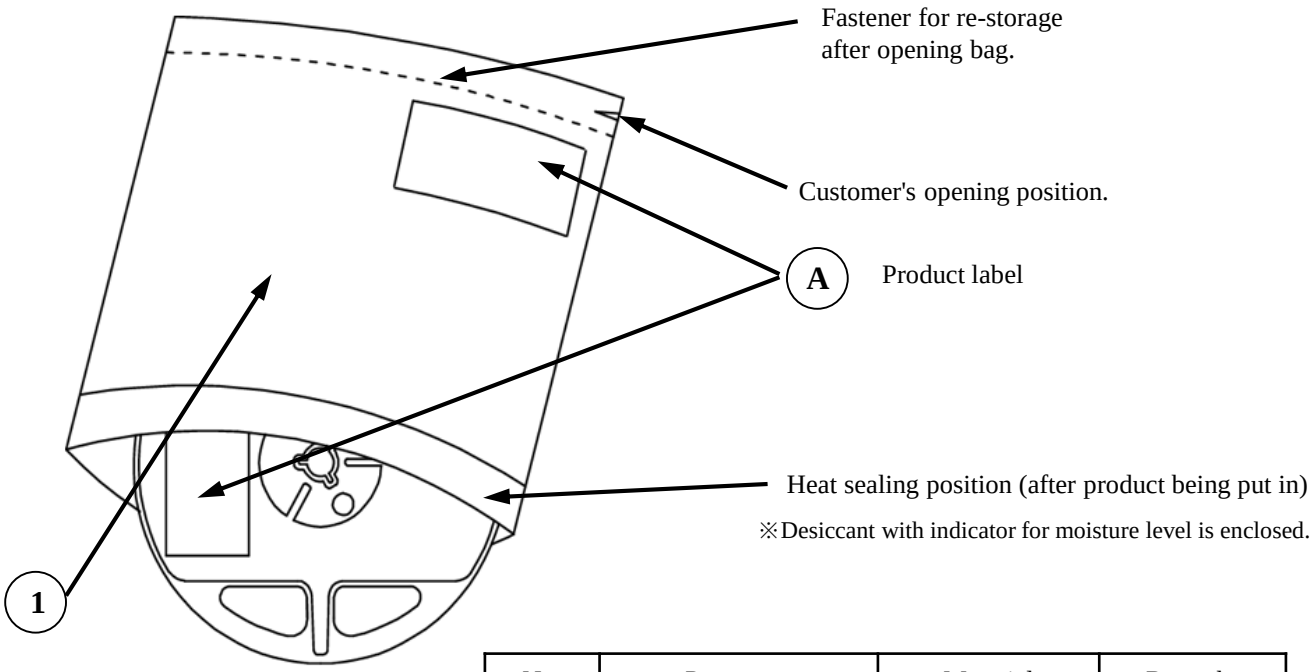
Baking process should be performed after LED having been taken out of the package.

Baking may be performed in the tape-reel form , however if it is performed with the reel stacked over one another, it may cause deformation of the reels and taping materials and later obstruct mounting. Please handle only once it has returned to room temperature. Provided that, baking process shall be 2 times max.

Packaging specifications

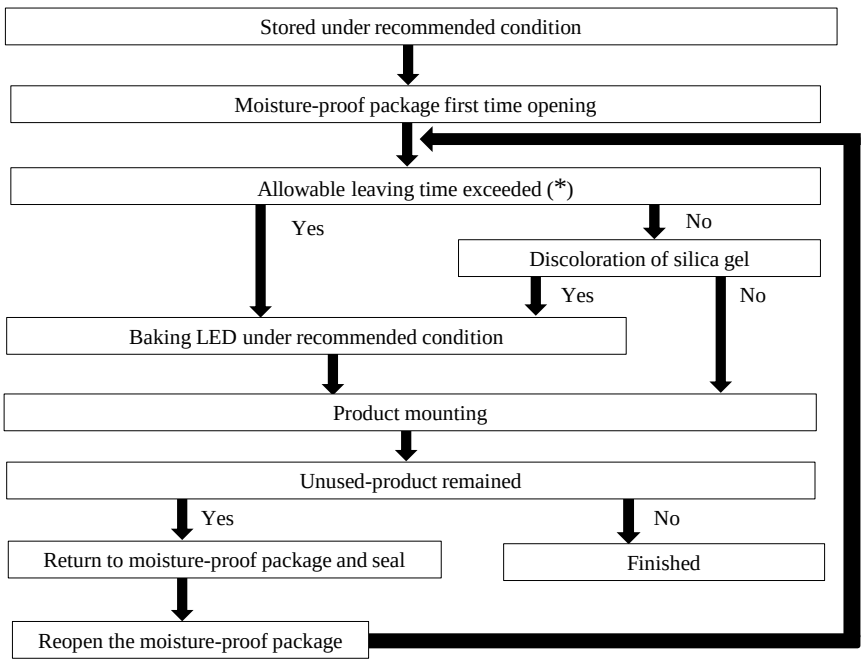
VXJB1104LSE-TR

【Moisture-proof packaging specification】



No.	Part name	Material	Remarks
①	Moisture-proof bag with Aluminum layer	PET+Al+PE	with ESD protection

【Flow chart-package opening to mounting】



Allowable leaving time means the maximum allowable leaving time after opening package, which depends on each LED type.
The allowable leaving time should be calculated form the first opening of package to the time when soldering process is finished.
When judging if the allowable leaving time has exceeded or not, please subtract the soldering time. The allowable leaving time after reopening should be calculated form the first opening of package, or from the time when baking process is finished.

Packaging specifications

VXJB1104LSE-TR

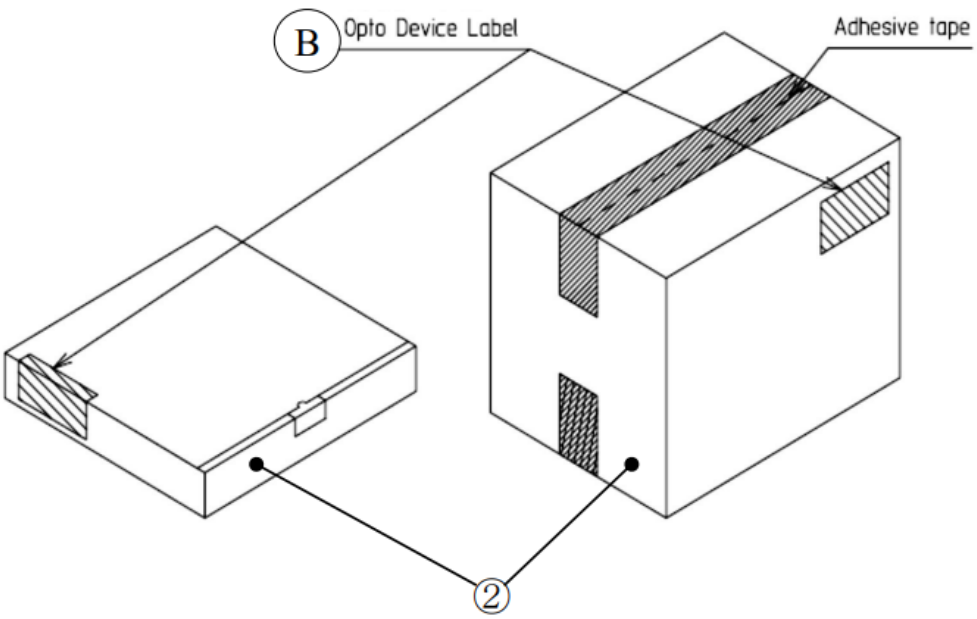
【Packing box】

(RoHS2 / ELV Compliant)

Box type	Outline dimension L × W × H (mm)	Capacity of the box
Type A	280 × 265 × 45	3 reels
Type B	310 × 235 × 265	15 reels
Type C	440 × 310 × 265	30 reels
Type D	305 × 270 × 65	3 reels
Type E	370 × 280 × 270	30 reels
Type F	530 × 380 × 270	60 reels

The above measurements are reference values.

The box is selected out of the above table by shipping quantity.



Type A
Material / box : Cardboard C5BF

Type B, C
Material / box : Cardboard K5AF
Partition : Cardboard K5BF

Type D
Material / box : Cardboard C5WF

Type E, F
Material / box : Cardboard BC-KA125/3CA125/KA125

No.	Part name	Material	Remarks
②	Packing box	Corrugated cardboard	without ESD protection

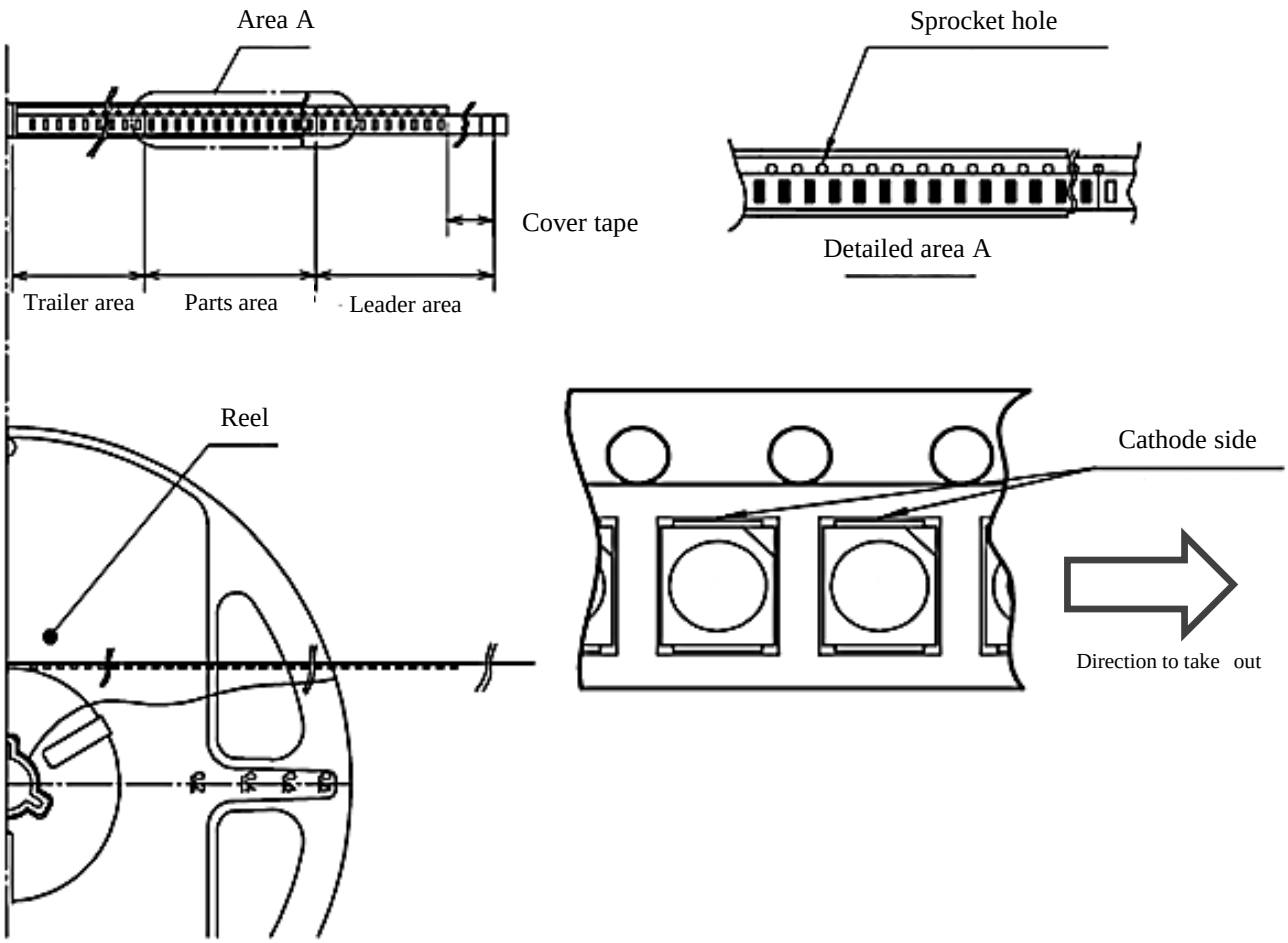
Taping and reel specifications

VXJB1104LSE-TR

(acc.to JIS-C0806-03)

【Appearance】



Note

"-TR" means Cathode Side of LEDs; should be placed on the sprocket-hole side.

Items		Specifications	Remarks
Leader area	Cover-tape	Cover-tape shall be longer than **320mm** without carrier-tape	The end of cover-tape shall be held with adhesive tape.
	Carrier-tape	Empty pocket shall be more than **20 pieces**.	Please refer to the above figure for Taping & reel orientation .
Trailer area		Empty pocket shall be more than **15 pieces**.	The end of taping shall be inserted into a slit of the hub.

Taping and reel specifications

VXJB1104LSE-TR

(acc.to JIS-C0806-03)

【 Qty. per reel】

2,000parts/reel
Minimum Qty. per reel might be 500 parts when getting less than 3,000 parts.
In such case, parts of 500-unit-qty. shall be packed in a reel and the qty. shall be identified on the label

【Mechanical strength】

Cover-tape adhesive strength shall be 0.1～1.0N (An angle between carrier-tape and cover-tape shall be170 deg.).
Both tapes shall be so sealed that the contained parts will not come out from the tape when it is bent at a radius of 15mm.

【 Others】

Reversed-orientation, Up-side down placing, side placing and out of spec. parts mix shall not be held.
Empty pocket per reel shall be defined as follows.

Qty./reel	Max. qty. of empty pocket	Remaks
500	1	-
1,000	1	-
1,500	1	-
2,000	2	No continuance

Special Notice to Customers Using the Products and Technical Information Shown in This Data Sheet

1) The technical information shown in the data sheets are limited to the typical characteristics and circuit examples of the referenced products. It does not constitute the warranting of industrial property nor the granting of any license.

2) For the purpose of product improvement, the specifications, characteristics and technical data described in the data sheets are subject to change without prior notice. Therefore it is recommended that the most updated specifications be used in your design.

3) When using the products described in the data sheets, please adhere to the maximum ratings for operating voltage, heat dissipation characteristics, and other precautions for use. We are not responsible for any damage which may occur if these specifications are exceeded.

4) The products that have been described to this catalog are manufactured so that they will be used for the electrical instrument of the benchmark (OA equipment, telecommunications equipment, AV machine, home appliance and measuring instrument).
The application of aircrafts, space borne application, transportation equipment, medical equipment and nuclear power control equipment, etc. needs a high reliability and safety, and the breakdown and the wrong operation might influence the life or the human body. Please consult us beforehand if you plan to use our product for the usages of aircrafts, space borne application, transportation equipment, medical equipment and nuclear power control equipment, etc. except OA equipment, telecommunications equipment, AV machine, home appliance and measuring instrument.

5) In order to export the products or technologies described in this data sheet which are under the "Foreign Exchange and Foreign Trade Control Law," it is necessary to first obtain an export permit from the Japanese government.

6) No part of this data sheet may be reprinted or reproduced without prior written permission from Stanley Electric Co., Ltd.

7) The most updated edition of this data sheet can be obtained from the address below:
http://www.stanley-components.com/en/
